Portage and Global Water Futures webinar series on  
Research Data Management

Kitchener – October 14, 2020

# Motivation for CaSPAr

- Environmental models used for various purposes (drought and flood simulations, climate predictions, hydro-power applications)
- Models are all different in their conceptualization and processes
- But all models require inputs (e.g., precipitation, temperature)
- Observations available when model is run in prior period
- If models run in forecast mode, these data are Numerical Weather Predictions (NWP)

# Motivation for CaSPAr

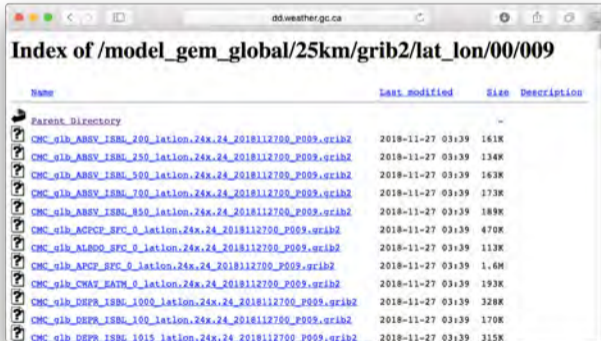

For forecast setup of models you might want to access:

- Different **variables** (e.g., temperature, precipitation, wind speed)
- Different **forecast horizons** (e.g., 24h lead time, 1 week lead time)
- Different **time period** (e.g., July 2019 and July 2020)
- Different **resolution** (e.g., 2.5km and 10km product)
- Different **domain** (e.g., Ontario and BC)

# ECCC's Current NWP Data Distribution System

## DataMart

[http://dd.meteo.gc.ca/about\\_dd\\_a propos.txt](http://dd.meteo.gc.ca/about_dd_a propos.txt)

The screenshot shows a web browser window with the address bar containing 'dd.weather.gc.ca'. The page title is 'Index of /model\_gem\_global/25km/grib2/lat\_lon/00/009'. Below the title is a table with columns for Name, Last modified, Size, and Description. The table lists various Grib2 files with their respective sizes and modification dates.

Name	Last modified	Size	Description

- no archive of forecasts
- data interpolated to grib2 supported grid
- no spatial cropping
- heavy post-processing

# Aim of CaSPAr

## archive

forecasts & analyses  
produced by

Environment and  
Climate Change Canada  
Environnement et  
Changement climatique Canada

## convert

raw FST data to  
standardized NetCDF

## provide

gis-based web interface  
to make data available

## Standardized File Format

# Standardized File Format

- ✓ CF-1.6 compliant NetCDF files
- ✓ projection information included

**#5**

## Seamless Utilization of Input Data

# Seamless Utilization of Input Data

– Models running with NetCDF inputs directly –

- Hydrologic Modeling Framework RAVEN
- Hydrologic Modeling Framework SUMMA
- Variable Infiltration Capacity Model VIC v5.0
- Mesoscale Hydrologic Model – mHM
- MEC-Surface & Hydrology model – MESH
- Weather Research and Forecasting Model – WRF-Hydro
- Community Land Model – CLM
- Multi-parametrization Land Surface Model – Noah-MP

# Summary of CaSPAr Highlights

1. **Individual subsetting** of data via web-interface and (soon) API
2. **Easy comparison** of NWP products
3. **Drastic reduction** of data amount to download
4. **Standardized** NetCDF file format (CF-1.6 compliant)
5. **Seamless utilization** of input data for model runs
  
6. **Fast** data download via Globus
7. **GitHub** library of data processing scripts
8. Modular and decoupled **Frontend and Backend**

# Global Water Futures

– Motivation Data Portal –

The world's largest university-led  
freshwater research program.

# Cuizinant

– The Analogy –

Slice-and-dice  
large, gridded  
NetCDF datasets

# Cuizinart

– CaSPAr vs. Cuizinart –

## Funded by FloodNet

Powered by J Mai, BA Tolson, KC Kornelsen,

# Cuizinart

– Dissemination of Large Gridded Datasets Within and Beyond GWF –

WRF control run over CONUS

*(Zhenhua Li, Yanping Li, et al.)*

resolution: 4 km, hourly

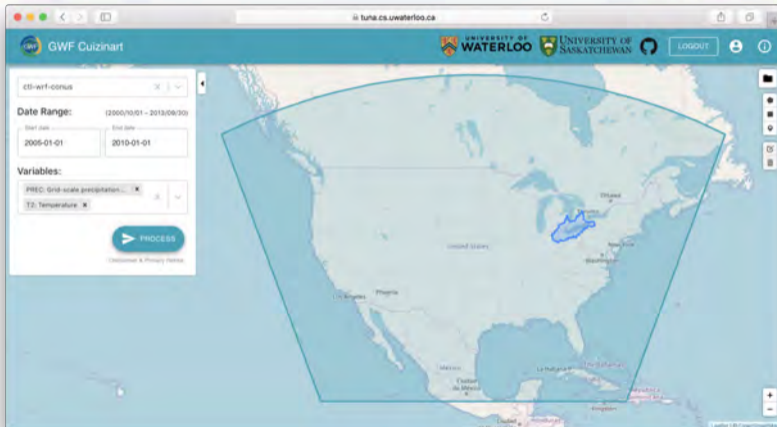

# of variables: 11

time period: 13 years

storage: **6.4 TB**

# Cuizinant

– Dissemination of Large Gridded Datasets Within and Beyond GWF –

# Cuizinart

– Dissemination of Large Gridded Datasets Within and Beyond GWF –

WRF control run over **Lake Erie**

resolution: 4 km, hourly

# of variables: 4 (of 11)

time period: 5 (of 13) years

storage: **11 GB** (0.2% of 6.4 TB)

processing time: 64 min (serial)

# Cuizinant

– Dissemination of Large Gridded Datasets Within and Beyond GWF –

- Cuizinant provides framework to **disseminate large, gridded datasets** used and produced by GWF including data forcings, static inputs, and model results
- Data need to be provided in standard CF-1.6 compliant NetCDF format
  - Attributes `long_name` and `units` provided for each variable
  - 2D fields of latitudes and longitudes (in degrees) need to be available
  - Unique name for product need to be provided
  - ...
- Checklist for specifications available:  
[http://www.civil.uwaterloo.ca/jmai/Checklist\\_NetCDF\\_Cuizinant.pdf](http://www.civil.uwaterloo.ca/jmai/Checklist_NetCDF_Cuizinant.pdf)

# Summary

1. **Individual subsetting** of data via web-interface
2. **Easy comparison** of different products
3. **Drastic reduction** of data to handle
4. **Standardized** NetCDF file format
5. **Seamless utilization** of input data for model runs
